BUYER RESEARCH BEHIND THE NARRATIVE

What buyers valued in workplace AI

Selected findings that informed the Workvivo HQ positioning and messaging work.

69% responded positively to a message about company culture, people, and systems.

31 of 45 participants selected Interested or Exciting.

THE STRATEGIC IMPLICATION

Make the employee experience context tangible. Explain what AI helps people do, then support the promise with evidence.

01 / WHAT EARNED INTEREST

Context gave the story substance.

Four selected message themes from seven tested statements. Labels below are paraphrased; percentages use the same response definition and base.

Understands culture, people, and systems **69%**

31 of 45 positive

Built around how employees communicate **60%**

27 of 45 positive

Explains whether communications landed **56%**

25 of 45 positive

Employees choose to use Workvivo **31%**

14 of 45 positive

The useful tension: an adoption claim alone earned less interest. That does not mean buyers did not value adoption: 29 of 45 rated proven employee adoption as essential to championing an AI platform.

Positive = Interested + Exciting. Q1. Base: all 45 participants.

02 / FROM EVIDENCE TO DECISIONS

A clearer promise.
A stronger proof standard.

01 Lead with relevant context

Make culture, people, and systems part of the value story. Show what that context changes in a recognisable employee task.

02 Keep the experience central

The qualitative synthesis surfaced embedded access and fewer context switches. Digital HQ expressed the broader ambition; this study did not test the HQ name.

03 Equip the champion with proof

The research distinguished an appealing message from the evidence buyers need before they advocate internally.

REQUIREMENTS RATED ESSENTIAL

89%	84%	64%
Trusted search quality	**Data stays in tenant**	**Proven employee adoption**
40 of 45	38 of 45	29 of 45

Method and scope Two-wave Wynter study, March-April 2026: 30 participants in wave 1 and 15 in wave 2. The combined analysis describes HR, transformation, innovation, IT, and other business buyers; 40 of 45 worked in organisations with 1,000+ employees. Q4 is the source for the essential requirements above.

Reading limits Small buyer panel, reported attitudes, and rounded percentages. No population estimate, statistical significance, purchasing behaviour, or causal uplift is claimed. Digital HQ was not tested as a name or final narrative. This brief uses the supplied aggregate analysis; respondent-level data was not independently re-audited.
